Jigsaw XGT

JV001GZ

Product Description

40V MAX XGT • 800 - 3 500 min⁻¹

Model JV001G is a cordless jigsaw powered by 40Vmax XGT® Li-Ion battery

This model comes with high power in a compact design and more efficient than our existing AC or DC models.

XGT technology and constant speed control reduce the chance of drop in cutting speed even during heavy duty applications such as cutting 48mm thick MDF.

• Barrel handle design increased control of cutting even upside down, as your grip is closer to the workpiece

• Constant speed control allows the jigsaw to maintain consistent blade speed through every cut regardless of the material

• Featuring soft no-load that minimize strokes per minute and subsequent vibration during startup until a load is detected

• Variable speed control by dial allowing the blade speed to be matched to the material, resulting in smoother and cleaner cuts

• Improved stability during cutting due to a wider base plate
